

Techline Sports Lighting: New "TRUE-Green" Lighting System offers "Zero" Operating Cost for five years.

Techline Sports Lighting now offers the first "True Green" System available in the sports lighting industry today. It provides the lowest operating cost and highest light levels of any "Green" system available.

The Techline System is also the only system that follows lighting design practices set forth by the Illumination Engineering Society of North America. No longer do you have to purchase a "Green" system that simply saves energy by reducing your light levels. You can now maintain higher light levels and obtain greater energy savings at the same time.

Full remote control capabilities are also available that assure your lights are never on unless needed eliminating further wasted energy.

Thank you for considering Techline Sports Lighting for your athletic field lighting. Techline Sports Lighting is a specialized supplier of sports lighting for outdoor athletic facilities. We have installed thousands of field lighting systems throughout the United States.

Contact Techline Sports Lighting at 800-500-3161 for your free estimate. Most systems can be shipped and installed within 3 weeks.

Hall of Fame Softball Complex!

Players, coaches, umpires, families and fans are enjoying newly renovated playing fields at the 14-acre Old Settlers Park in Round Rock, Texas. Long considered "The Sports Capital of Texas", Round Rock did everything in typical Texas style; BIG!

ICON personnel worked with design professionals from Shrickel-Rollins and Associates in Dallas, Texas and BWM Group in Round Rock, Texas to produce large shade structures behind the backstops on 24 fields. These structures were part of an overall master plan which became a \$5.5 million renovation to the ball fields in what is now called The Hall of Fame Softball Complex.

The cantilevered shade structures have built-up stone pedestal bases that match stone work throughout the park. The tubular steel frames bolted together on site, and the pre-cut roof panels were installed directly to the frame. Construction services were provided by Journeyman Construction from Austin, Texas, Walk in the Park Construction, Inc. from Irving, Texas and Chasco Constructors from Austin, Texas. Sales representation for ICON Shelter Systems Inc. was by The PlayWell Group Inc. in Dallas, Texas.

The first games were played November 8, 2008 in conjunction

with City of Round Rock fall season for Girls Softball League. City officials stated that they have plans to enlarge the complex in the coming years.

Gym Floor Maintenance

THE PROBLEM – Gym floors are typically high use areas that are infrequently cleaned. The daily build up of soil can cause damage to the floor finish as well as creating a slippery surface for student athletes to play on. Dirt or dust acts like sandpaper on wood. As you walk, run, jump or slide on the floor, the shoes along with the dirt or dust are in effect "sanding" the finish from the surface. The best way to keep the gym floor in top-notch condition is through frequent daily cleanings. The most effective way to pick-up dirt or dust is through damp mopping with clean water and/or cleaning solution and a clean mop head.

WHAT YOU CAN DO!

– To maintain the floor in the best condition, start a daily maintenance program, using clean water and a clean mop. Clean the floor first thing in the morning and then just before
